Student Management System

Description:

The Student Management System is a comprehensive tool designed to manage student information efficiently. This project facilitates various administrative tasks such as tracking student records, managing attendance, and maintaining academic performance. It aims to streamline educational administration processes through an intuitive and user-friendly interface.

My Role:

I played a crucial role in developing the backend of this project using Java. My responsibilities included designing and implementing database schemas, creating RESTful APIs, and ensuring the overall scalability and performance of the system.

Technologies Used:

Java

Spring Boot

Hibernate

MySQL

HTML/CSS/JavaScript for the frontend

Git/GitHub for version control

Repository Link:

You can view the project on GitHub at the following link: [Student Management System](#)
